“Molecular Packing and Singlet Fission”

Abstract. Singlet fission, a process most simply described as splitting of a singlet exciton into two triplet excitons, is of interest for attempts to exceed the Shockley-Queisser limit on the efficiency of single-junction solar cell. Molecular packing in the solid phase plays a key role and will be discussed.

Tutti gli interessati sono invitati a partecipare

A handwritten signature in black ink, reading "Anna Spalletti".
